## Chapter 1

# Main Page

Simulation of [Zombie](#) apocalypse.

**Author**

Sebastian jantos

**Date**

06/06/2016

## Chapter 2

# Jantos Sebastian Henryk

Projekt jest symulacją apokalipsy zombie. Symulacja opiera się na obiektach reprezentujących kraje. W każdym kraju znajdują się ludzie, na których własne statystyki mają wpływ także czynniki kraju (mocno uproszczone do siły, zręczności obywateli oraz środowiska, czy sprzyja wirusowi czy nie). Co kilka tur wirus rozprzestrzenia się sam z siebie zarażając kolejną osobę. W każdej turze - odpowiednik dnia - dochodzi do starcia między człowiekiem i zombie. Gdy wygrywa człowiek, zombie umiera, zaś gdy wygrywa zombie - zamienia tego człowieka w zombie.

**Zombie** mają tu pewną przewagę, tym bardziej że nie zadają obrażeń, więc jeśli kogoś zamienia to ma on 100% HP, jednak w zamian mają dużą mniejszą szansę na trafienie (wygranie). Ludzi podzieliłem na trzy rodzaje↔ : przeciętnych, wojskowych (lepsze statystyki ataków) oraz naukowców (są bezbronni, ich jedynym zadaniem jest praca nad lekiem). **Zombie** także dzielą się na trzy rodzaje: przeciętne, berserk (wyprowadza kilka ciosów naraz co daje mu większą szansę na zwycięstwo - odpowiednik wojskowych) oraz kamikaze (znikoma szansa na wygranie, ale po śmierci "wybuchają" zarażając kilka osób z otoczenia).

Szukanie leku opiera się na losowaniu naukowców, którzy jeśli będą mieć szczęście, poczynią postępy w badaniach, odejmując od (sztywno ustalonego pułapu) 10 000 pkt ilość punktów odpowiadającej ich inteligencji. Gdy wartość badań osiągnie 0, to lek jest gotowy. Wtedy lek z szansą 50/50 jest co turę rozpylany i ma szansę uleczyć kilka zombie naraz. Poprzez uleczenie rozumiem przywrócenie ich do ludzkiej postaci, jednak tylko do postaci przeciętnej (upraszam w ten sposób element trwania leczenia, osłabienie itd).

Symulacja będzie przyjmować dane wejściowe: n oznaczające ilość krajów w symulacji oraz: populację, liczbę naukowców, liczbę żołnierzy, liczbę zombie.

populacja = przeciętni + naukowcy + żołnierze + zombie

Aby łatwiej było podać większe ilości danych wejściowych, wszystkie liczby poza n będą wczytywane z pliku .txt, którego nazwy nie będzie trzeba podawać. Wystarczy samo n.

## Chapter 3

# Hierarchical Index

### 3.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Country . . . . .	13
Human . . . . .	14
CommonHuman . . . . .	12
ScienceHuman . . . . .	16
MilitaryHuman . . . . .	15
Zombie . . . . .	17
BerserkZombie . . . . .	11
CommonZombie . . . . .	12
SuicideZombie . . . . .	17

## Chapter 4

# Class Index

### 4.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">BerserkZombie</a>	11
<a href="#">CommonHuman</a>	12
<a href="#">CommonZombie</a>	12
<a href="#">Country</a>	13
<a href="#">Human</a>	14
<a href="#">MilitaryHuman</a>	15
<a href="#">ScienceHuman</a>	16
<a href="#">SuicideZombie</a>	17
<a href="#">Zombie</a>	17

## Chapter 5

# File Index

### 5.1 File List

Here is a list of all documented files with brief descriptions:

D:/Programowanie/virus2/ <b>Country.h</b>	??
D:/Programowanie/virus2/ <b>Human.h</b>	??
D:/Programowanie/virus2/ <a href="#">main.cpp</a>	<a href="#">19</a>
D:/Programowanie/virus2/ <b>Zombie.h</b>	??

## Chapter 6

# Class Documentation

### 6.1 BerserkZombie Class Reference

Inheritance diagram for BerserkZombie:

#### Public Member Functions

- [BerserkZombie](#) ()  
*Creates new [BerserkZombie](#), it has better `_attackChance` because it can strike few times.*
- int [attackChance](#) ()  
*returns [Zombie](#) `_attackChance` (10%-19%)*
- int [attackCount](#) ()  
*returns [Zombie](#) `_attackCount` (1-3)*
- virtual int [who](#) ()  
*returns [Zombie](#) type*
- virtual bool [tryAttack](#) ()  
*returns info if attack was successful*
- virtual string [description](#) ()  
*write some info about [Zombie](#) in output.txt*

#### Private Attributes

- int `_attackChance`
- int `_attackCount`

The documentation for this class was generated from the following files:

- D:/Programowanie/virus2/Zombie.h
- D:/Programowanie/virus2/Zombie.cpp

## 6.2 CommonHuman Class Reference

Inheritance diagram for CommonHuman:

### Public Member Functions

- `CommonHuman ()`  
*Creates new `CommonHuman` with some random parameters.*
- `int attack ()`  
*returns `Human _attack` (30-39)*
- `int attackChance ()`  
*returns `Human _attackChance` (50%-59%)*
- `int dodgeChance ()`  
*returns `Human _dodgeChance` (50%-59%)*
- `int intelligence ()`  
*Inherited, will never be called.*
- `virtual int who ()`  
*returns `Human` type*
- `virtual string description ()`  
*writes info about `Human` in output.txt*

### Private Attributes

- `int _attack`
- `int _attackChance`
- `int _dodgeChance`

The documentation for this class was generated from the following files:

- `D:/Programowanie/virus2/Human.h`
- `D:/Programowanie/virus2/Human.cpp`

## 6.3 CommonZombie Class Reference

Inheritance diagram for CommonZombie:

### Public Member Functions

- **CommonZombie** ()  
*Creates new **CommonZombie** with random parameters.*
- int **attackChance** ()  
*returns **Zombie** \_attackChance (10%-29%)*
- virtual int **who** ()  
*returns **Zombie** type*
- virtual bool **tryAttack** ()  
*returns info if attack was successful*
- virtual string **description** ()  
*writes info about **Zombie** in output.txt*

### Private Attributes

- int **\_attackChance**

The documentation for this class was generated from the following files:

- D:/Programowanie/virus2/Zombie.h
- D:/Programowanie/virus2/Zombie.cpp

## 6.4 Country Class Reference

### Public Member Functions

- **Country** (unsigned int population, int sl, int ml, int zl)  
***Country** class constructor. Creates object that contains vector of Humans an Zombies. sl - number of scientists, ml - number of soldiers zl - number of zombies sl+ml+zl=population Different types of Humans and Zombies are randomly placed in their vectors.*
- int **humans** ()  
*returns number of Humans*
- int **zombies** ()  
*returns number of Zombies*
- int **cure** ()  
*returns cure progress*
- void **changeHumanToZombie** (std::vector< **Human** \* >::iterator humanOpponent)  
*Erase beaten **Human** from vector. Makes new random type **Zombie**.*
- void **fight** (fstream &output, int outputInfo)  
*Simulate one fight between **Human** and **Zombie**. There is 50/50 chances for **Zombie** first attack. If zombie hits, **Human** take no damage, but it is changed into **Zombie**. **Human** have higher attack chance and few of their attacks are enough to kill **Zombie**. If outputInfo==1 then output.txt would have much more precise info.*
- void **spreadVirus** (int i, fstream &output)  
*Once per few days (1-7) one random **Human** turns into random **Zombie**.*
- bool **searchForCure** (fstream &output)  
*Scientists try to find cure, there are 25% chances for making progress. To discover cure, they must lower \_cure to 0. Every time 10% of scientists try to reduce it by their \_intelligence.*
- void **cureSomeZombies** (fstream &output)  
*If cure progress is 0 - antidote is complete and every day 5-9 Zombies are cured to **CommonHuman**.*
- string **description** ()  
*Shows some info about **Country** in console or writes it into output.txt.*
- string **showEveryone** ()

## Private Attributes

- `std::vector< Human * > vectorOfHumans`
- `std::vector< Zombie * > vectorOfZombies`
- `int _humanPower`  
*Humans \_attack bonus depends on Country.*
- `int _humanAgility`  
*Humans \_dodgechance bonus depends on Country.*
- `int _scienceLevel`
- `int _militaryLevel`
- `int _environment`  
*Parameter that influence frequency of spreadvirus function.*
- `int _scientists`
- `int _soldiers`
- `int _commons`
- `int _cure`

The documentation for this class was generated from the following files:

- D:/Programowanie/virus2/Country.h
- D:/Programowanie/virus2/Country.cpp

## 6.5 Human Class Reference

Inheritance diagram for Human:

## Public Member Functions

- `Human ()`  
*Every Human has the same HP.*
- `int humanID ()`  
*returns Human ID*
- `int humanHP ()`  
*returns Human HP*
- `int isDead ()`  
*check if Human is dead*
- `void damage (int dmg)`
- `virtual int attack ()=0`
- `virtual int attackChance ()=0`
- `virtual int dodgeChance ()=0`
- `virtual int intelligence ()=0`
- `virtual int who ()=0`  
*returns 0-CommonHuman 1-ScientistHuman 2-SoldierHuman*
- `virtual string description ()=0`

### Private Attributes

- int `_humanID`
- int `_humanHP`

### Static Private Attributes

- static int `_humanCounter` = 1  
*Gives ID to new Humans.*

The documentation for this class was generated from the following files:

- D:/Programowanie/virus2/Human.h
- D:/Programowanie/virus2/main.cpp

## 6.6 MilitaryHuman Class Reference

Inheritance diagram for MilitaryHuman:

### Public Member Functions

- `MilitaryHuman ()`  
*Creates `MilitaryHuman`, it has better stats to fight Zombies.*
- int `attack ()`  
*returns `Human_attack` (50-59)*
- int `attackChance ()`  
*returns `Human_attackChance` (65%-74%)*
- int `dodgeChance ()`  
*returns `Human_dodgeChance` (65%-74%)*
- int `intelligence ()`  
*Inherited, will never be called.*
- virtual int `who ()`  
*returns `Human` type*
- virtual string `description ()`  
*writes info about `Human` in output.txt*

### Private Attributes

- `int _attack`
- `int _attackChance`
- `int _dodgeChance`

The documentation for this class was generated from the following files:

- `D:/Programowanie/virus2/Human.h`
- `D:/Programowanie/virus2/Human.cpp`

## 6.7 ScienceHuman Class Reference

Inheritance diagram for ScienceHuman:

### Public Member Functions

- `ScienceHuman ()`  
*Creates new `ScienceHuman` with random `_intelligence`.*
- `int intelligence ()`  
*returns `Human` `_intelligence`*
- `virtual int who ()`  
*returns `Human` type*
- `virtual string description ()`  
*writes info about `Human` in `output.txt`*

### Private Attributes

- `int _intelligence`

The documentation for this class was generated from the following files:

- `D:/Programowanie/virus2/Human.h`
- `D:/Programowanie/virus2/Human.cpp`

## 6.8 SuicideZombie Class Reference

Inheritance diagram for SuicideZombie:

### Public Member Functions

- `SuicideZombie ()`  
*Creates new `SuicideZombie`, if it dies, it spread the virus to few (2-5) neighbors of `Human` opponent.*
- `int attackChance ()`  
*returns `Zombie_attackChance` (1%-4%)*
- `virtual int who ()`  
*returns `Zombie` type*
- `virtual bool tryAttack ()`  
*returns info if attack was successful*
- `virtual string description ()`  
*writes some info about `Zombie` in output.txt*

### Private Attributes

- `int _attackChance`

The documentation for this class was generated from the following files:

- `D:/Programowanie/virus2/Zombie.h`
- `D:/Programowanie/virus2/Zombie.cpp`

## 6.9 Zombie Class Reference

Inheritance diagram for Zombie:

## Public Member Functions

- [Zombie](#) ()  
*Every [Zombie](#) has the same HP.*
- int [zombieID](#) ()  
*returns [Zombie](#) ID*
- int [zombieHP](#) ()  
*returns [Zombie](#) HP*
- void [damage](#) (int dmg)  
*damages [Zombie](#)*
- bool [isDead](#) ()  
*check if [Zombie](#) is dead*
- virtual int **attackChance** ()=0
- virtual int [who](#) ()=0  
*returns 0-CommonZombie 1-SuicideZombie 2-BerserkZombie*
- virtual bool **tryAttack** ()=0
- virtual string **description** ()=0

## Private Attributes

- int **\_zombieID**
- int **\_zombieHP**

## Static Private Attributes

- static int [\\_zombieCounter](#) =1  
*Gives ID to new Zombies.*

The documentation for this class was generated from the following files:

- D:/Programowanie/virus2/Zombie.h
- D:/Programowanie/virus2/[main.cpp](#)

## Chapter 7

# File Documentation

### 7.1 D:/Programowanie/virus2/main.cpp File Reference

```
#include "Zombie.h"
#include "Human.h"
#include "Country.h"
#include <iostream>
#include <vector>
#include <cstdlib>
#include <time.h>
#include <fstream>
```

#### Functions

- void [simulateCountry](#) (int population, int scientists, int soldiers, int zombies, int outputInfo)  
*function loops [Country::fight\(\)](#), [Country::searchForCure\(\)](#), [Country::cureSomeZombies\(\)](#) and [Country::spreadVirus\(\)](#) as long as there are humans() or zombies(). It adds also few info lines to output.txt and prints it in console.*
- void [fileLoad](#) ()  
*Loads data from input.txt that contains numbers needed in [Country::Country\(\)](#)*
- int [main](#) (int argc, char const \*argv[])  
*Sets srand(time(NULL)), load file, loops [simulateCountry\(\)](#) n times (n - first console argument). Second console argument can change output.txt to more or less precise log.*

#### Variables

- std::vector< int > **numbers**
- fstream **output**
